EXPERIENCE

Endpoint Systems Administrator

Feb 2026 – Present

UW School of Medicine & Public Health, Institute on Aging | Madison, WI • Part-time

- Triage and resolve ~20 Windows/macOS, network, and account tickets per week for 50+ researchers and staff; document 15+ repeat fixes in a shared knowledge base the rest of the team now works from.
- Image and provision endpoints, administer accounts and group access in Active Directory, configure VPN and network access, and keep machines current through patching and backups.
- Improve site accessibility and page performance with semantic HTML, alt text, and asset cleanup.

Artificial Intelligence Engineer Intern

May 2026 – Jul 2026

PwC Middle East, Digital & Cyber | Amman, Jordan

- Shipped backend services for an AI-driven investor-services platform for Qatar's Ministry of Commerce and Industry, owning 10+ FastAPI endpoints and 20+ Pydantic data models end to end.
- Containerized services with Docker and built a 50+ request REST API test suite in Bruno, replacing manual endpoint checks and catching schema regressions pre-release.
- Developed 3 PyTorch model and data pipelines across Databricks and Azure, owning preprocessing and evaluation runs behind the platform's AI features.

Client Support Technician Intern

Dec 2023 – Feb 2024

The Stevie Awards | Amman, Jordan

- Resolved 200+ tickets at 95%+ SLA compliance and 70–80% first-contact resolution; cut first-response time to under 4 hours by redesigning triage and escalation workflows.

Software Intern

May 2023 – Jul 2023

Autographics | Amman, Jordan

- Developed Python features using OOP design and wrote 40+ automated and manual test cases that caught regressions before deployment.
- Debugged failures by analyzing logs, reproducing bugs in isolated virtual machines, and validating fixes across environments.

PROJECTS

PL Watch Party — Premier League Watch-Party Finder | pl-watch-party.vercel.app

2026

Next.js • TypeScript • Tailwind CSS • Supabase (Postgres) • Google Maps/Places API • football-data.org • Node

- Designed and shipped a nationwide full-stack matchday finder spanning US cities coast to coast, a full 380-fixture Premier League season, 400+ venues, and a 64-group supporters-club directory.
- Automated a full season of fixture syncing from football-data.org through a service-role API route and ranked 400+ Google Places venues by popularity.
- Added anonymous real-time RSVP with live attendance counts over Supabase Realtime, plus geolocation that auto-selects the nearest city and sorts venues by distance.

SmartTransit — Reliability-First Transit Planner (MadData25) | smarttransit.help • [Devpost](https://devpost.com)

Feb 2026

Next.js • TypeScript • Tailwind • Python • FastAPI • GTFS • Madison Metro BusTime API

- Built a reliability-first transit app with a 4-person team at MadData25, helping UW–Madison students time departures and predict crowding and ghost-bus risk on Route 80; led frontend and UI.
- Computed segment-level travel times from GTFS data and solved Route 80's circular loop by inferring route variants and snapping live vehicles to the correct stop sequence.

Campus Navigator Web Application | [Demo](#)

Jun 2025 – Jul 2025

Java • Dijkstra's Algorithm • JUnit • HTTP Server

- Implemented Dijkstra shortest-path routing over a real campus dataset (DOT format, 160+ nodes, 800+ edges) on a custom hashtable-backed weighted graph.
- Built backend pathfinding APIs and an HTTP server; wrote JUnit integration tests and resolved edge cases during team integration.

EDUCATION

B.S. Computer Science | B.S. Data Science | Minor: Mathematics

Expected May 2028

University of Wisconsin–Madison | GPA: 3.5 | Dean's List: Fall 2025–2026

Relevant Coursework: Algorithms (CS 577), Systems Programming in C, Data Structures, Discrete Mathematics, Statistics in R

Activities: Data Science Club, Claude Builder Club, Kappa Eta Kappa, Alpha Lambda Mu, Arab Student Association

SKILLS

Languages: Java, Python, C++, C, TypeScript, JavaScript, SQL, R

Web & Frameworks: React, Next.js, Node.js, Tailwind CSS, FastAPI, Pydantic, HTML/CSS

Data & Cloud: PostgreSQL, Supabase, Docker, Azure, Databricks, PyTorch, REST APIs, Vercel, Git/GitHub, Linux/CLI, Active Directory
